

White Salt Block and Brick

Champions Choice® White Salt Blocks and Bricks are the economical and efficient means for introducing salt as a nutrient into an animal's diet. Salt is needed by all classes of animals, but especially by herbivores (grass-eating animals). Ratios of potassium to sodium may reach 17 to 1 in forage feeds; thus, salt is required to narrow this ratio, in order to counteract the metabolic action of high levels of potassium. Weather-resistant for free-choice feeding.

No salt has better bloodlines.™
