

Dust-Off[®] for Farms & Ranches

Control. Stabilize. Save.[™]

collaborate > create > succeed[™]

Cargill[™]

Cost effective dust control and soil stabilization

Dirt roads are as common as livestock on rural farms and ranches. They are also the source of a common problem – road dust. Fortunately, Dust-Off® dust suppressant offers an easy, money-saving way to control dust that left untreated can compromise health, safety and productivity.

Stabilize Roads, Reduce Repairs

Dust-Off® compacts and stabilizes dirt roads – lengthening the time between costly maintenance work.

Improve Crop Yields

Dust can cover nearby crops and vegetation, stunting their growth due to the shading effect from clogging of the plant's pores and the delivery of dust mites. Reducing the impact of dust on vegetation is a vital part of an integrated farm management system.

Help Meet Anti-Pollution Standards

State air boards require that particulate air pollution caused by dirt roads be controlled as part of a dust abatement program.

Improve Visibility, Prevent Accidents

Windblown dust can restrict visibility and cause accidents. Dust-Off® clears the air and helps keep dirt roads safer to travel.

Extend the Life of Tractors, Trucks & More

Dust-Off® suppresses the dust that can contribute to wear and tear on the moving parts of trucks, tractors and other costly machinery.

Protect the Health of Families & Workers

Controlling dust and particulates with Dust-Off® helps provide a more healthful environment for farm and ranch families and their workers.

Keep Dust Down and Costs Low. Contact your local Dust-Off® distributor to learn more or call Cargill Salt at 1-888-385-SALT (7258).
