

Ice Melter Application and Storage Tips

Application Tips

- Take note of the temperature, and adjust application rates. If applying at or near the product's low temperature rating, use maximum rate listed on the package.
- Once ice and snow soften, remove slush and excess melter from pavement for good surface maintenance and to prevent re-freezing.
- Re-apply as necessary.

Storage Tips

- Store in a dry place.
- Close and re-seal package tightly to keep product dry, or place in moisture-proof container. (If over-exposed to moisture, ice melters can harden and cake. If so, break down before spreading).
- Keep out of reach of pets and children.
