

Industrial metalworking

Performance components
for use in metalworking and
forming applications

Cargill[®]

Advanced performance components for metalworking processes

The metalworking industry is constantly undergoing change driven by the demand for superior performance products to provide improved productivity at lower cost. As a global supplier of metalworking fluid components and with our broad experience in this field we have an understanding of the issues faced and are committed to offering our customers innovative and creative solutions.

As technologies and working practices develop, metalworking fluid formulators, as well as base fluid and additive suppliers, must adapt quickly to support the advances taking place. We recognize these changes and the diverse demands placed on the metalworking fluid formulation and have developed a broad range of advanced performance products with the following functionalities:

- Base oils for neat, semi-synthetic and synthetic metalworking fluids
- Lubricity boosters
- Emulsifiers
- Fatty acids
- Corrosion inhibitors

Base oils

Our range of Priolube™ and Emkarox™ base fluids provide outstanding lubricity and cooling and our emulsification portfolio offers the formulator emulsion stability, tramp oil rejection and extended fluid lifetime.

Lubricity boosters

In a world where chlorinated paraffins have become less acceptable through legislation or self-regulation, high molecular weight complex esters offer a viable alternative. We have developed a range of complex esters under the Priolube™ brand designed to help you, the formulator, create products which meet the challenging demands of the metalworking industry.

Emulsifiers

Our emulsifier technologies can be used to create a stable and predictable formulation, and offer high emulsion stability in use.

Fatty acids and corrosion inhibitors

Our fatty acid products are widely used in industrial applications and have multiple functions. When neutralised with an alkanolamine, they can be used as an effective corrosion inhibitor.

Product name	Physical form	Acid value (mgKOH/g)
Priacid™ A95	Waxy solid	60
Pripol™ 1017	Liquid	193

About us

The Energy Technologies business in Cargill Bioindustrial creates, makes and sells specialty chemicals and additives for the global energy market. Working in close collaboration with our customers, we apply sustainable concepts and deep scientific expertise so that together we can efficiently power the world of tomorrow.

At our core, we are experts in synthetic ester and polyalkylene glycol chemistries, taking products from lab scale through to full manufacturing. Investing in the development of new chemistries allows us to support our customers in meeting new industry challenges.

For those who dare to imagine a brighter future, we establish long lasting relationships and create bespoke industry solutions through our integrated research & development and global manufacturing capabilities. Being both global and local, you have direct access to our network of technical experts. We look forward to talking to you.

Further information

Cargill Bioindustrial sales and distribution are coordinated through an extensive worldwide network of technical and commercial experts. For further information or guidance please contact us:
