

Acme Pave-Tite

DESCRIPTION

Acme Pave-Tite is a single-use admixture designed to make better, more uniform quality concrete pavers and SRWs especially when finer sands are being utilized in an effort to make a tighter surface.

BENEFITS

The use of Acme Pave-Tite will improve surface texture, increase strength and density, and reduce the tearing and pulling associated with face-up block products and face and base pavers.

HOW TO USE

Acme Pave-Tite should be added to the mix with the final water at a rate of 14 to 20 ounces per 100 pounds of cement. Care should be taken to test for the best performance with a Cargill representative before using in production runs.

PHYSICAL FORM

Milky white

SHIPPING CONTAINER

55 gallon drum, 330 gallon totes

COMPANION PRODUCTS

Water Repellents, Rack Coating, Form Release Agents
