Acme RTU and RTU-S

**DESCRIPTION**
Acme RTU is a ready-to-use plasticizer designed to be used in the manufacture of concrete block, concrete pipe and other low to no slump concrete products where superior performance and ease of use are required.

Acme RTU-S is a swipe variation of RTU. It will produce more swipe or smear and lubricity which may prove desirable in pipe and or in mix designs with more fines.

**BENEFITS**
The use of Acme RTU will improve green strength, reduce machine wear, give better surface texture, reduce absorption, eliminate the fine cracks, and reduce culls and chipping.

**HOW TO USE**
Acme RTU should not be diluted. Suggested dosage is 2 to 8 ounces per one hundred pounds of cement or other pozzolan. Introduction can be anytime during the mix cycle. In many cases additional water is required without increasing slump.

**PHYSICAL FORM**
Straw to clear liquid.
- Uniform consistency
- Rust inhibited
- Freeze thaw stable

**SHIPPING CONTAINER**
55 gallon drums and 330 gallon totes

**COMPANION PRODUCTS**
Water Repellents, Rack Coating, Form Release Agents, Accelerators
