Cargill Palm Oil Progress Update December 2015

At Cargill, we remain committed to building a traceable and sustainable palm oil supply chain. In our fourth palm oil progress update, we share details of our grievance process, an update on our response to the fires and haze in Indonesia, and our latest traceability results.

Fires in Indonesia

Cargill has a strict zero-burning policy and does not condone burning of land for any means. Since early September, we identified a number of hotspots and fires both in and outside the boundaries of our oil palm plantations in South Sumatra and West Kalimantan, Indonesia. Close to 45 fires were identified on and around our plantations; 34 of which were detected by satellite. We have since extinguished all the fires in question.

We provided firefighting assistance to the local government to manage fires outside our boundaries that were often spread by burning embers from some distance away. Large and small excavators were deployed, along with water pumps equipped with extension hoses to put out the fires in and outside the boundaries of our plantations. We constructed a 53-km long canal to keep fire encroachment at bay, while doubling as a water storage for firefighting purposes. Water from the canal was used as part of water-bombing efforts by Indonesia's National Disaster Management Agency.

We have reported all fire incidents to the local police, complete with on-ground and drone photos to the local police and mandated that on-site colleagues work with the local community to immediately notify our regional offices and local authorities of any fires detected. The well-being of our employees and the local community will always be a top priority. Cargill regularly conducts fire prevention awareness programs for the community and always has firefighting vehicles and personnel on standby.

Grievance process

Cargill is committed to sustainable palm oil production and sourcing. We believe it is critical that all parts of our palm oil supply chain – plantations, processing and trading operations and all third-party suppliers – act in an environmentally sustainable and socially responsible manner. Cargill's Palm Grievance Procedure is established to provide a transparent, open, and predictable process for dealing with grievances. Any grievance, complaint or concern from external parties concerning the implementation of Cargill's palm supply chain commitments may be submitted in writing, online or by phone via Cargill's secure Ethics Open Line system.

Supply Chain Traceability Progress

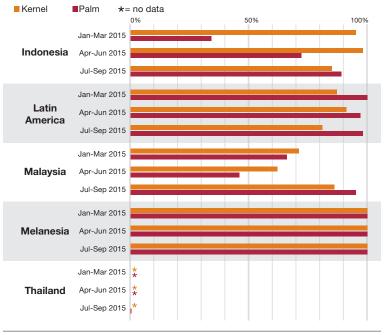

TRACEABILITY TO THE MILL BY MARKET

Cargill is working to build a 100 percent traceable and sustainable supply chain. It is our goal to achieve 100 percent traceability to the mill by December 31, 2015 and to provide palm oil that is 100 percent traceable to sustainably managed plantations by 2020.

TRACEABILITY TO THE MILL BY COUNTRY OF ORIGIN

Note: The traceability data included in this report should be considered estimates and the percentages were calculated based on self-declarations by our suppliers. The data covers what we physically delivered and processed. Cargill is cooperating with industry partners to develop verification and reporting of traceability information.

Malaysia origin data covers all exports, while domestic sales are taken into account under Malaysia domestic. 'Other markets' includes palm and kernel products shipped to Latin America (those countries not individually indicated already) UK, Central and Eastern Europe (the Caucasus), West and North Africa, Middle East, central and South Asia, Asia Pacific, and the Pacific rim. In some cases, palm and/or kernel products may be bought from another supplier who has a 'No Deforestation' policy and is mapping their supply chain but is unwilling to share their data. We are proactively engaging these suppliers to address this issue. In the absence of substantive progress, some sourcing relationships may be reconsidered. We will do this in a transparent manner.
