

# Soy sourcing data

**Cargill is committed to creating sustainable supply chains in support of our purpose to nourish the world in a safe, responsible and sustainable way. We operate at the intersection of agriculture and business, connecting farmers to consumers around the world to ensure both sustainability values and agricultural development simultaneously thrive.**

The work of the Soft Commodities Forum complements Cargill's commitments that are outlined in our [Policy on Sustainable Soy from South American Origins](#) and our [South American Soy Action Plan](#).

In the 25 priority municipalities, Cargill sources more than 96% directly from farmers, allowing us to have more transparency into our supply chain.

We have reached 61% of traceability to the farm level allowing us to gather insights that enable positive transformation in our supply chains. By December 2020, we will complete single-point location mapping for 100% of direct suppliers (non-financed) in MATOPIBA, Amazon, Mato Grosso (BR163 and West) and those adjacent to protected areas.

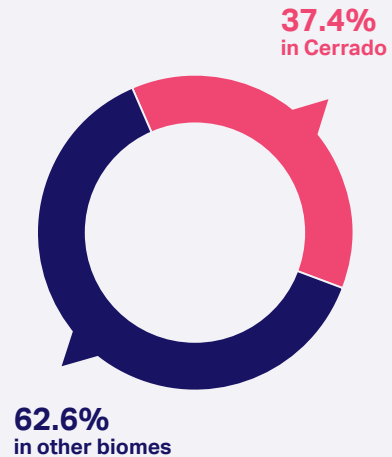

The Soft Commodities Forum (SCF) is a global platform for leading soft commodities companies, convened by the World Business Council for Sustainable Development (WBCSD) for the purpose of advancing collective action around common sustainability challenges.
