

DHAlgae gummy

Algae-based gummy containing 62.5mg DHA per piece.*

*Recommended intake = 4 pieces per day

Health-conscious consumers prioritize preventative health measures to sustain their vitality and well-being. At the same time, they're increasingly looking for sustainable, plant-based options that allow them to align their proactive approach to health with environmental values.

In addition, these consumers also have a strong need to "stay active" and balance between a nutritious diet and an intake of supplements. Within the supplement space Omega 3 is one of the most sought after and rapidly expanding ingredients.

Omega 3 popularity is driven by a positive association with cognition and heart health.**

Even though fish has been the most common source of Omega 3, consumers are leading the shift to plant-based sources like algae.

Our algae DHA meets the needs of today's consumers, by making the development of vegan and plant-based Omega 3 gummies a reality.
